

[METHOD OF REALIZING MULTIPLE SIMULTANEOUS CHAT SESSIONS THROUGH MESSAGE TRANSFER]

Abstract of Disclosure

A method of chatting for handheld devices and a related system. A user sets up caller and receiver information, allowing the handheld device to determine whether or not incoming messages are from the set receivers. The handheld device displays all messages from the set receivers. The system has a message chat settings module, a message transfer module, a message entry module, and a message filtering module. The user enters a message chat program, sets up information for the chat parties, and uses message transfer to perform multi-party chat.
